Slovník

semestrální práce DSA

Zadání

Napište program realizující slovník, ve kterém českému slovu (bez diakritiky)
odpovídá jedno nebo několik anglických slov. Počáteční obsah slovníku bude
dán textovým souborem. Program pak umožňuje slovník doplňovat,
opravovat a v něm hledat.

Operace

- najít anglické překlady k zadanému slovu
- zrušit záznam pro zadané slovo
- vložit nový překlad nebo i nové slovo k překladu
- vypsat slovník

co umí můj slovník

```
Dictionary
Semestral project for D S A
2022, Aleksandr Shabelnikov, VSPJ
Loading data from file
Opening file /Users/mrmidi/CLionProjects/SEM/cs-en.csv
Loaded 2000 words
Time: 0.002815

    Add new word

2. Search czech word
Search english word
4. Delete word
5. Print dictionary
6. Make new file with cs-en dictionary
7. Make new file with en-cs dictionary
8. Exit
Enter your choice:
```

- Datová struktura: BST
- Druhá datava struktura: BST!
- Hašovaní pomoci C++ std::hash

POINTER na BST Node

Node.h

```
class Node {
public:
    size_t key;
    std::string word;
    std::string definition;
    Node *pLeft;
    Node *pRight;
    Node(size_t key, std::string word, std::string definition)
        this->key = key;
        this->word = word;
        this->definition = definition;
        pLeft = NULL;
        pRight = NULL;
```

Node_EN.h

```
class Node_EN {
public:
    size_t key;
    Node_EN *pLeft;
    Node_EN *pRight;
    Node *pNode;
   Node_EN(size_t key, Node &pNode)
        this->key = key;
        this->pNode = &pNode; // reference to the node in another language
        pLeft = NULL;
        pRight = NULL;
```

Realizace BST.h & BST_En.h

```
public:
   BST(); // constructor
   void insert(size_t key, std::string word, std::string definition);
   Node * insertWithReturn(size_t key, std::string word, std::string definition);
   void remove(size_t key);
   Node* search(size_t key);
   void print();
   void print(Node *pNode);
   void clear();
   void clear(Node *pNode);
    void getRoot();
   Node *getSuccessor(Node *pDelNode);
   void makeFile();
   void makeFile(Node *pNode, std::ofstream &file);
   void makeFileEn();
   void makeFileEn(Node *pNode, std::ofstream &file);
```

```
public:
    BST_EN(); // constructor
    void insert(size_t key, Node pNode);
    void remove(size_t key);
    Node_EN* search(size_t key);
    void print();
    void print(Node_EN *pNode);
    void clear();
    void clear(Node_EN *pNode);
    void getRoot();
    void insert(size_t key, Node *pNode);
    Node_EN *getSuccessor(Node_EN *pNode);
```

Poznamki

- Proč nevyvážený
- Proč 2 stromy
- Co vylepšit (kolizie)

Děkují za pozornost
